

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class ebi_util_curl_url_exception["ebi::util::curl::URLException"]
    ebi_util_curl_url_exception --|> std_exception
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class 'std::exception', which is divided into three horizontal sections. Below it is a grey box representing the derived class 'ebi::util::curl::URLException', also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the derived class box to the bottom section of the base class box, indicating that 'URLException' inherits from 'std::exception'.

ebi::util::curl::URLException
Exception

+ URLRetrievalException()
+ what()
